LAB REPORT

Name	Dhuneshwaran V
Register Number	192324169
Course Name:	Internet Programming
Course Code	CSA4301
Lab Details:	Exp 1 To 6

Experiment 1: Library Management System

Aim:

To design and develop a Library Management System webpage using HTML and CSS with navigation links, book search, student portal, study materials, and admin dashboard sections.

Procedure:

1. Create an HTML document with the basic structure.

2. Add a header with the title and navigation links such as Home, Login, Register, Books, Materials, and Contact.

3. Create a welcome banner with a description and a Get Started button.

4. Add feature cards for Book Search, Student Portal, Study Materials, and Admin Dashboard.

5. Create an About section and footer.

6. Link the external CSS file to style the webpage.

Code:

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <title>Library Management System</title>

  <link rel="stylesheet" href="style.css">

</head>

<body>

<header>

  <h1>📚 Library Management System</h1>

  <nav>
```

```
        <a href="index.html">Home</a>

        <a href="login.html">Login</a>

        <a href="register.html">Register</a>

        <a href="books.html">Books</a>

        <a href="materials.html">Materials</a>

        <a href="contact.html">Contact</a>

    </nav>

</header>

<section class="banner">

<h2>Welcome to Library Management System</h2>

<p>

Search books, issue books, return books, download study materials and manage your library digitally.

</p>

<a href="login.html" class="btn">Get Started</a>

</section>
```

<section class="features">

<h3>📖 Book Search</h3>

Find books instantly using title or author.

<h3>👨‍🎓 Student Portal</h3>

View borrow history and check fines.

<h3>📂 Study Materials</h3>

Download semester-wise notes and PDFs.

<h3>👨‍💼 Admin Dashboard</h3>

Manage books, students and library records.

</section>

<section class="about">

<h2>About Library</h2>

The Library Management System is designed for colleges and schools to maintain book records, issue books, return books, calculate fines and provide digital study materials

</section>

<footer>

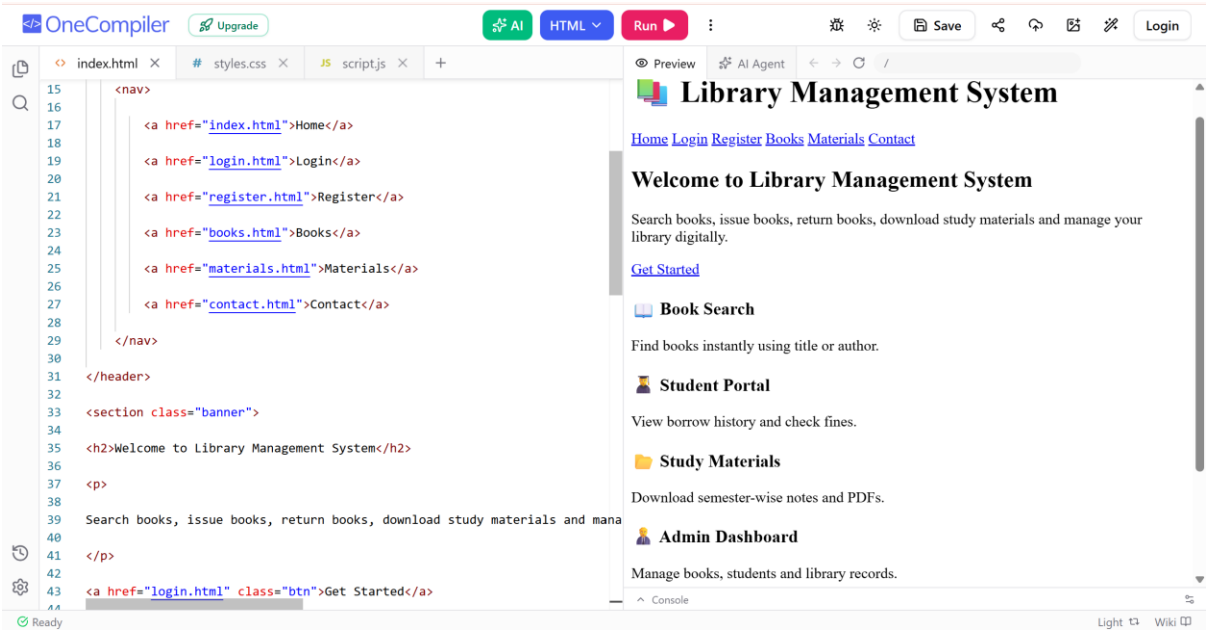

© 2026 Library Management System | Developed by Akash

</footer>

</body>

</html>

OUTCOME:

Result:

Thus, the Library Management System webpage was successfully designed using HTML and CSS with navigation links and different library-related sections.

Experiment 2: Hotel Room Booking System

Aim:

To design and develop a Hotel Room Booking System webpage that displays available rooms, accepts booking details, and shows booking history.

Procedure:

1. Create an HTML document and link the CSS and JavaScript files.

2. Design the header and navigation links for Home, Rooms, Book Room, Booking History, and Contact.

3. Display different room types, including Standard, Deluxe, Family, and Suite rooms, with their prices and facilities.

4. Create a booking form to collect the customer's name, email, phone number, room type, check-in date, check-out date, and number of guests.

5. Add JavaScript functions to select rooms and handle booking operations.

6. Create a booking history table to display reservation details.

7. Add contact information and a footer.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<title>Hotel Room Booking System</title>
<link rel="stylesheet" href="style.css">
</head>
<body>
<header>
<h1>Hotel Room Booking System</h1>
<nav>
<a href="#home">Home</a>
<a href="#rooms">Rooms</a>
<a href="#booking">Book Room</a>
<a href="#history">Booking History</a>
<a href="#contact">Contact</a>
</nav>
</header>
<!-- Home -->
<section id="home">
<h2>Welcome to Dream Hotel</h2>
<p>
Book luxury rooms online at affordable prices.
Enjoy comfortable stay with excellent facilities.
```

```
</p>
<img src="https://images.unsplash.com/photo-1566073771259-6a8506099945?w=900" width="100%" height="350">
</section>
<!-- Rooms -->
<section id="rooms">
<h2>Available Rooms</h2>
<div class="card">
<h3>Standard Room</h3>
<p>Price : ₹1500 / Night</p>
<ul>
<li>Free WiFi</li>
<li>AC</li>
<li>TV</li>
</ul>
<button onclick="selectRoom('Standard Room',1500)">Book</button>
</div>
<div class="card">
<h3>Deluxe Room</h3>
<p>Price : ₹2500 / Night</p>
<ul>
<li>Free Breakfast</li>
<li>AC</li>
<li>TV</li>
<li>WiFi</li>
</ul>
<button onclick="selectRoom('Deluxe Room',2500)">Book</button>
</div>
<div class="card">
<h3>Family Room</h3>
<p>Price : ₹3500 / Night</p>
```

```
<ul>
<li>4 Members</li>
<li>WiFi</li>
<li>TV</li>
<li>Breakfast</li>
</ul>
<button onclick="selectRoom('Family Room',3500)">Book</button>
</div>
<div class="card">
<h3>Suite Room</h3>
<p>Price : ₹5000 / Night</p>
<ul>
<li>Luxury Stay</li>
<li>Mini Bar</li>
<li>Swimming Pool</li>
<li>King Bed</li>
</ul>
<button onclick="selectRoom('Suite Room',5000)">Book</button>
</div>
</section>
<!-- Booking -->
<section id="booking">
<h2>Book Your Room</h2>

</thead>
<tbody id="historyTable">
</tbody>
</table>
</section>
<!-- Contact -->
<section id="contact">
```

<h2>Contact Us</h2>

Email : hotel@gmail.com

Phone : +91 9876543210

Address : Chennai, India

</section>

<footer>

© 2026 Hotel Booking System

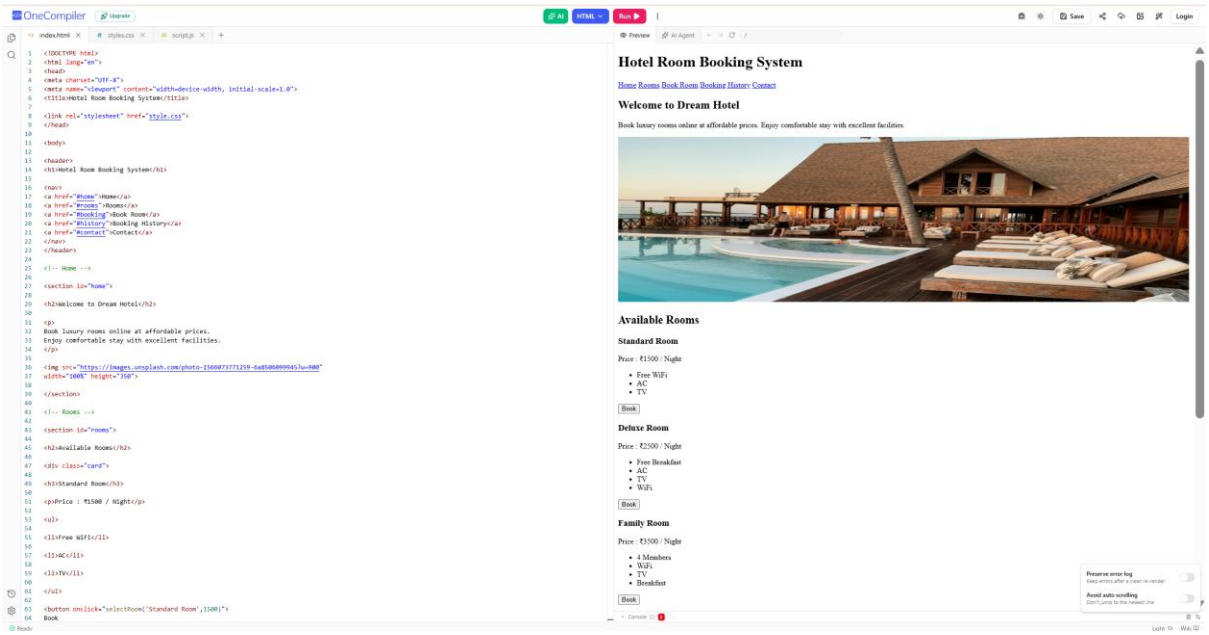

</footer>

<script src="script.js"></script>

</body>

</html>

Outcome:

Result:

Thus, the Hotel Room Booking System webpage was successfully developed with room details, a booking form, and a booking history section.

Experiment 3: Bus Ticket Booking System

Aim:

To design and develop a Bus Ticket Booking System webpage that allows users to enter passenger details, book tickets, cancel tickets, and submit comments.

Procedure:

1. Create an HTML document and link the CSS and JavaScript files.

2. Add a header displaying the title Bus Ticket Booking System.

3. Create a ticket booking section with fields for passenger name, route, journey date, bus type, and seat number.

4. Add a Book Ticket button to handle ticket booking.

5. Create a cancellation section with a booking ID field and Cancel Ticket button.

6. Add a comments section with a text area and Submit button.

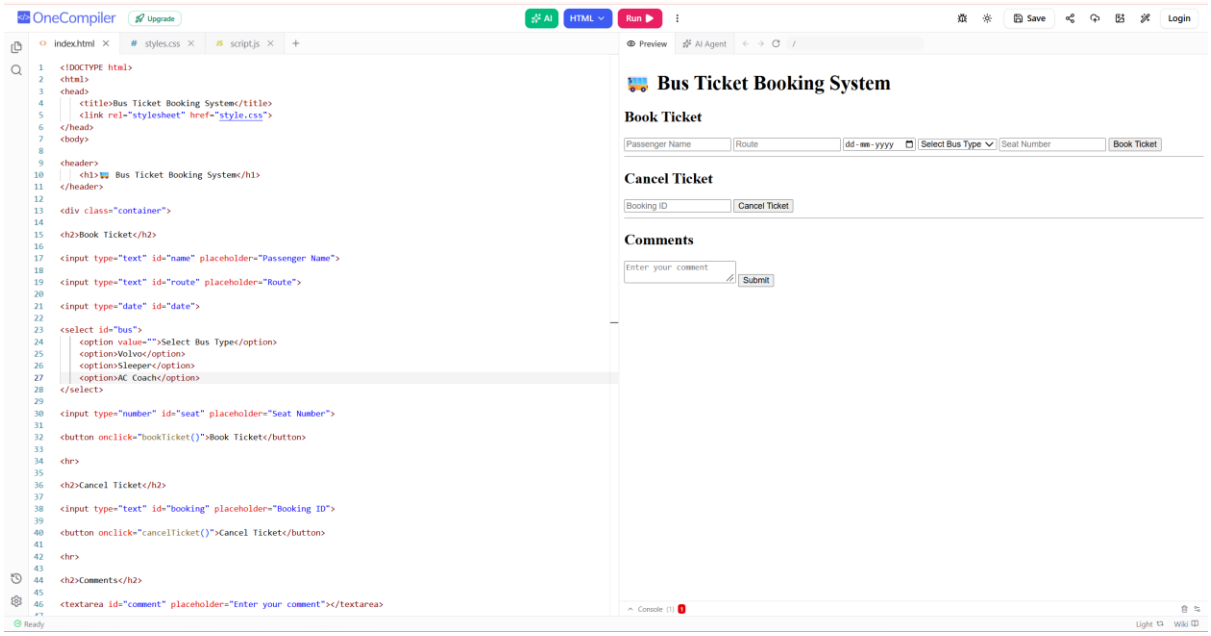

7. Use JavaScript functions to handle booking, cancellation, and comment submission.

CODE:

```
<!DOCTYPE html>
<html>
<head>
   <title>Bus Ticket Booking System</title>
   <link rel="stylesheet" href="style.css">
</head>
<body>
<header>
   <h1>🚌 Bus Ticket Booking System</h1>
</header>
<div class="container">
<h2>Book Ticket</h2>
<input type="text" id="name" placeholder="Passenger Name">
<input type="text" id="route" placeholder="Route">
<input type="date" id="date">
<select id="bus">
```

```
    <option value="">Select Bus Type</option>
    <option>Volvo</option>
    <option>Sleeper</option>
    <option>AC Coach</option>
</select>
<input type="number" id="seat" placeholder="Seat Number">
<button onclick="bookTicket()">Book Ticket</button>
<hr>
<h2>Cancel Ticket</h2>
<input type="text" id="booking" placeholder="Booking ID">
<button onclick="cancelTicket()">Cancel Ticket</button>
<hr>
<h2>Comments</h2>
<textarea id="comment" placeholder="Enter your comment"></textarea>
<button onclick="addComment()">Submit</button>
</div>
<script src="script.js"></script>
</body>
</html>
```

Outcome:

Result:

Thus, the Bus Ticket Booking System webpage was successfully developed with ticket booking, cancellation, and customer comment sections.

Experiment 4: Train Reservation System

Aim:

To design and develop a Train Reservation System webpage that provides login, ticket booking, PNR status checking, and ticket cancellation features.

Procedure:

1. Create an HTML document and link the CSS and JavaScript files.

2. Design a header with the title Train Reservation System.

3. Create a login section with email and password fields.

4. Develop a ticket booking form with passenger name, source station, destination station, journey date, and travel class.

5. Add a Book Ticket button to handle reservation requests.

6. Create a PNR status section to check ticket status using a PNR number.

7. Add a ticket cancellation section using the PNR number.

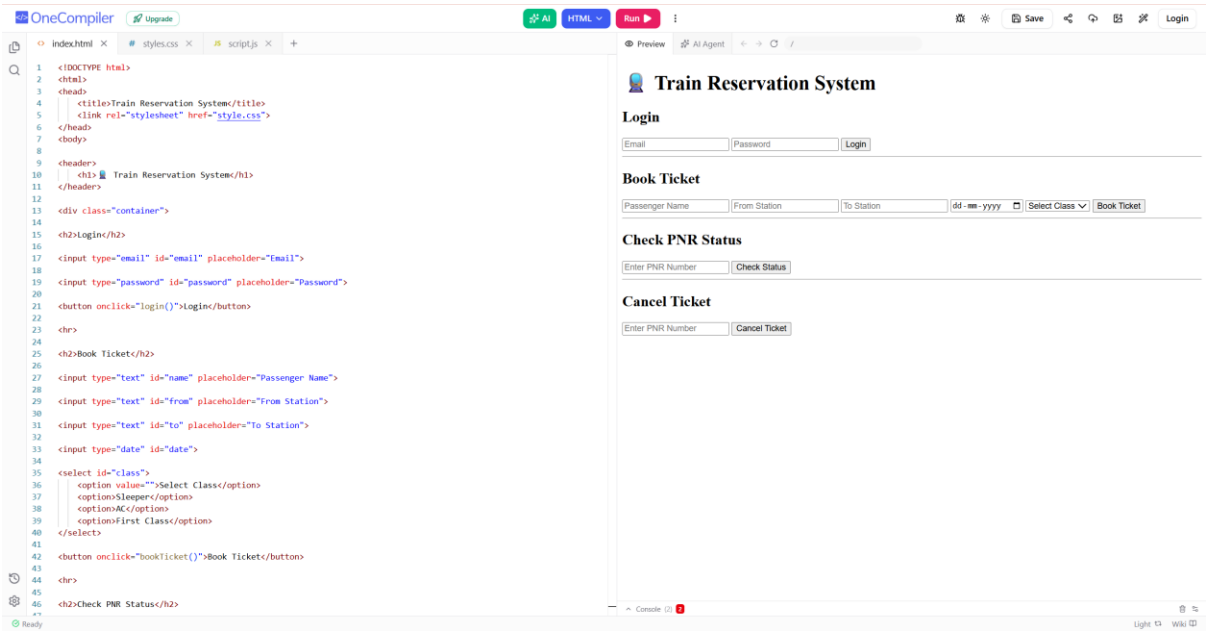

8. Use JavaScript functions to handle login, booking, PNR status checking, and cancellation.

CODE:

```
<!DOCTYPE html>
<html>
<head>
<title>Train Reservation System</title>
<link rel="stylesheet" href="style.css">
</head>
<body>
<header>
<h1> 🚆 Train Reservation System</h1>
</header>
<div class="container">
<h2>Login</h2>
<input type="email" id="email" placeholder="Email">
<input type="password" id="password" placeholder="Password">
<button onclick="login()">Login</button>
<hr>
<h2>Book Ticket</h2>
<input type="text" id="name" placeholder="Passenger Name">
<input type="text" id="from" placeholder="From Station">
<input type="text" id="to" placeholder="To Station">
<input type="date" id="date">
<select id="class">
<option value="">Select Class</option>
<option>Sleeper</option>
<option>AC</option>
<option>First Class</option>
</select>
<button onclick="bookTicket()">Book Ticket</button>
<hr>
<h2>Check PNR Status</h2>
```

```
<input type="text" id="pnr" placeholder="Enter PNR Number">
<button onclick="checkPNR()">Check Status</button>
<hr>
<h2>Cancel Ticket</h2>
<input type="text" id="cancelpnr" placeholder="Enter PNR Number">
<button onclick="cancelTicket()">Cancel Ticket</button>
</div>
<script src="script.js"></script>
</body>
</html>
```

Outcome:

Result:

Thus, the Train Reservation System webpage was successfully developed with login, ticket booking, PNR status checking, and cancellation sections.

Experiment 5: Flight Reservation System

Aim:

To design and develop a Flight Reservation System webpage that provides flight searching, ticket booking, payment options, booking status checking, cancellation, customer feedback, and admin reports.

Procedure:

1. Create an HTML document and link the CSS and JavaScript files.

2. Design a header displaying the title Flight Reservation System.

3. Create a login section with email and password fields.

4. Develop a flight search form with source, destination, journey date, and flight class.

5. Add a ticket booking section to enter the passenger name and seat number.

6. Create a payment section with amount and payment mode options such as UPI, credit card, and debit card.

7. Add sections for checking booking status using a PNR number and cancelling tickets.

8. Create a customer feedback section with a text area and Submit button.

9. Display an admin report table containing flight numbers, booked seats, and available seats.

10. Use JavaScript functions to handle the different operations.

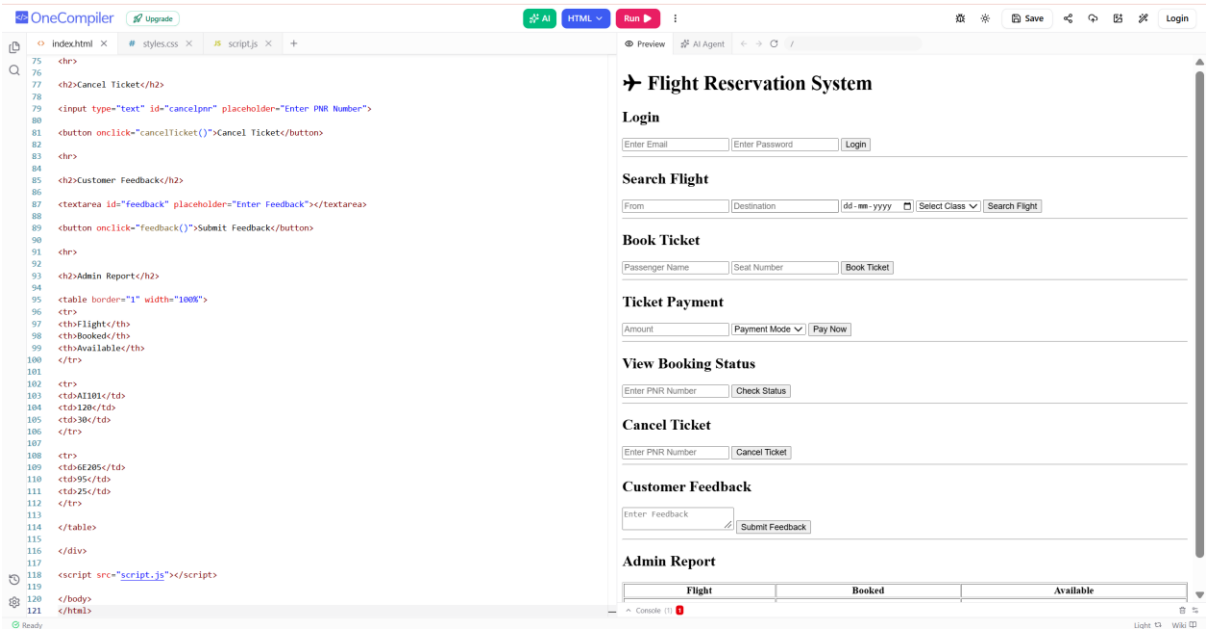

CODE:

```
<!DOCTYPE html>
<html>
<head>
<title>Flight Reservation System</title>
<link rel="stylesheet" href="style.css">
</head>
<body>
<header>
<h1>✈ Flight Reservation System</h1>
</header>
<div class="container">
<h2>Login</h2>
<input type="email" id="email" placeholder="Enter Email">
<input type="password" id="password" placeholder="Enter Password">
```

```
<button onclick="login()">Login</button>
<hr>
<h2>Search Flight</h2>
<input type="text" id="from" placeholder="From">
<input type="text" id="to" placeholder="Destination">
<input type="date" id="date">
<select id="flightClass">
<option value="">Select Class</option>
<option>Economy</option>
<option>Business</option>
<option>First Class</option>
</select>
<button onclick="searchFlight()">Search Flight</button>
<hr>
<h2>Book Ticket</h2>
<input type="text" id="name" placeholder="Passenger Name">
<input type="text" id="seat" placeholder="Seat Number">
<button onclick="bookTicket()">Book Ticket</button>
<hr>
<h2>Ticket Payment</h2>
<input type="number" id="amount" placeholder="Amount">
<select id="payment">
<option value="">Payment Mode</option>
<option>UPI</option>
<option>Credit Card</option>
<option>Debit Card</option>
</select>
<button onclick="payment()">Pay Now</button>
<hr>
<h2>View Booking Status</h2>
<input type="text" id="pnr" placeholder="Enter PNR Number">
<button onclick="status()">Check Status</button>
```

```
<hr>
<h2>Cancel Ticket</h2>
<input type="text" id="cancelpnr" placeholder="Enter PNR Number">
<button onclick="cancelTicket()">Cancel Ticket</button>
<hr>
<h2>Customer Feedback</h2>
<textarea id="feedback" placeholder="Enter Feedback"></textarea>
<button onclick="feedback()">Submit Feedback</button>
<hr>
<h2>Admin Report</h2>
<table border="1" width="100%">
<tr>
<th>Flight</th>
<th>Booked</th>
<th>Available</th>
</tr>
<tr>
<td>AI101</td>
<td>120</td>
<td>30</td>
</tr>
<tr>
<td>6E205</td>
<td>95</td>
<td>25</td>
</tr>
</table>
</div>
<script src="script.js"></script>
</body>
</html>
```

Outcome:

Result:

Thus, the Flight Reservation System webpage was successfully developed with flight search, ticket booking, payment options, booking status, cancellation, feedback, and admin report sections.

Experiment 6: Online Cake Ordering System

Aim:

To design and develop an Online Cake Ordering System using HTML, CSS, and JavaScript that allows users to browse cakes, register, log in, place orders, manage delivery addresses, and track order status, while enabling the admin to manage products and orders.

Procedure:

1. Create an HTML webpage with separate sections for Admin and Student (User).

2. Design the admin login page and provide options to manage products, post cake details, upload images, and manage orders.

3. Create user registration and login pages.

4. Display cakes with images, descriptions, categories, subcategories, and prices.

5. Implement search and filter options to help users find cakes based on their preferences and price range.

6. Provide options to view cake details, add cakes to the cart, and place orders.

7. Create forms to add and update shipping addresses.

8. Provide options to view order history and track shipping status.

9. Use CSS to create an attractive, responsive interface and JavaScript to handle user interactions.

10. Develop the admin panel to update order status and manage cake inventory.

CODE :

```
<!DOCTYPE html>
<html>
<head>
  <title>Online Cake Shop</title>
  <style>
    body {
      font-family: Arial;
      text-align: center;
      background: #fff0f5;
    }
    h1 { color: #d63384; }
    .cake {
      background: white;
      padding: 15px;
      margin: 15px auto;
      width: 250px;
      border-radius: 10px;
    }
    button {
      background: #d63384;
```

```
            color: white;
            padding: 10px;
            border: none;
            cursor: pointer;
        }
    </style>
</head>
<body>

    <h1>🎂 Online Cake Shop</h1>
    <h2>Available Cakes</h2>

    <div class="cake">
        <h3>Chocolate Cake</h3>
        <p>Price: ₹500</p>
        <button onclick="buy('Chocolate Cake', 500)">
            Order Now
        </button>
    </div>

    <div class="cake">
        <h3>Black Forest Cake</h3>
        <p>Price: ₹600</p>
        <button onclick="buy('Black Forest Cake', 600)">
            Order Now
        </button>
    </div>

    <div class="cake">
        <h3>Vanilla Cake</h3>
        <p>Price: ₹400</p>
```

```
    <button onclick="buy('Vanilla Cake', 400)">
      Order Now
    </button>
  </div>

  <h2 id="result">Your order will appear here</h2>

  <script>
    function buy(name, price) {
      let customer = prompt("Enter your name:");

      if (customer && customer.trim() !== "") {
        document.getElementById("result").innerHTML =
          "Thank you, " + customer +
          "! You ordered " + name +
          ". Total: ₹" + price;
      }
    }
  </script>

</body>
</html>
```

Outcome:

Result:

Thus, the Online Cake Ordering System was designed to provide cake browsing, searching, ordering, cart management, shipping address management, and order tracking features for users, along with product and order management features for the admin.
